

THOR Equal Weight Low Volatility ETF

Systematic. Live since 2020.

/ THE STRATEGY

The fund holds ten S&P 500 sector ETFs in equal weight. THOR's proprietary signal processing, the same engineering math used in noise-canceling headphones, evaluates each sector independently for risk-on or risk-off conditions.

When a sector turns risk-off, its sleeve rotates into short-duration Treasuries, and the cascade continues sector by sector as conditions deteriorate. If every sector signals risk-off, the portfolio can sit entirely in T-bills. The system detects regime changes as they form. It does not forecast.

/ WHY IT EXISTS

Large drawdowns do the lasting damage. A portfolio that gives back years of gains in one bad stretch pushes clients into the worst decisions at the worst time. This strategy seeks to avoid the big hits and participate in the bulk of uptrends, de-risking step by step as evidence mounts rather than waiting on a forecast to be right.

/ THE TRACK RECORD

The underlying sector strategy has run live in separately managed accounts and model portfolios since 2020, through the 2020 crash, the 2022 bear market, and the rotations of 2024 and 2025. The ETF, launched in September 2022, runs the same systematic process in a fund wrapper. The vehicle is newer than the strategy behind it.

FUND FACTS

Fund	THOR Equal Weight Low Volatility ETF
Ticker	THLV
Exchange	NYSE Arca
Inception	9/12/22
Structure	Actively managed ETF
Adviser	THOR Financial Technologies

AT A GLANCE

- Ten equal-weight S&P 500 sector sleeves
- Each sector evaluated independently by proprietary signals
- Risk-off sleeves cascade into short-duration Treasuries
- Can move fully to T-bills in broad risk-off conditions
- Detects regime changes instead of forecasting them
